

17. (Twice Amended) A motor-driven pump unit according claim 26, wherein the at least one brush holder contains a carbon brush, which extends parallel to a rotary axis of the rotor.

18. (Twice Amended) A motor-driven pump unit according claim 17, wherein the carbon brushes are arranged in alignment with a commutator on said rotor, and wherein said commutator has a contact surface that is at a right angle to a rotary axis of the rotor.

24. (Twice Amended) A motor-driven pump unit according to claim 23, wherein said at least one brush holder includes at least two brush holders which are arranged concentrically to the rotary axis of the rotor.

25. (Twice Amended) A motor-driven pump unit according to claim 24, wherein the brush holders extend parallel to the axis of the rotor.

✓Please cancel claims 14, 16 and 19-23.

²⁷
Please add new claim ~~26~~ as follows:

²⁷
~~26~~. (New) A motor driven pump unit for antilock brake systems, comprising:
an electronic motor including a rotor,
a pump operatively coupled to the electric motor,
an electronic control unit,
wherein said pump is positioned between said electric motor and said
electronic control unit,
wherein said electronic unit includes at least one brush holder that extends
from the electronic unit, passing through the pump and into an inner portion of said motor in
proximity to said rotor.
